Will AI Replace My Role?

TRY-IT #1

AI Recruiter / ATS Score

Learners paste their resume summary and see what an AI recruiter might notice first.

PASTE RESUME SUMMARY / LINKEDIN ABOUT SECTION

Python developer with 2 years experience. Built dashboards and APIs. Worked with SQL and basic machine learning projects.

TARGET ROLE

**Score my profile**

Fresher sample

Strong sample

Weak sample

AI RECRUITER OUTPUT

ATS SCORE

59/100**Needs stronger role-specific proof**

Matched keywords:

sql

dashboard

python

Missing / weak signals:

excel

power bi

tableau

analytics

statistics

AI feedback: Add measurable project outcomes, tools used, deployment details, and business impact. Example: "reduced dashboard refresh time by 40%" beats "worked on dashboard".

Learning: Resume screening is a classification + ranking problem. Modern systems also use NLP embeddings to match candidate profiles with job descriptions.

HOW TO RUN IN CLASS

Ask learners to paste their real summary. Then ask: "What one keyword increased your

score?" This converts abstract NLP into a personal career moment.

TRY-IT #2

Fake News Detector

Learners paste a WhatsApp forward or headline and see NLP-style risk signals.

PASTE HEADLINE / FORWARD

Government giving ₹5 lakh to every citizen! Click now before midnight to claim.

**Detect fake signals****Balanced news****Clickbait****Phishing**

NLP RISK ANALYSIS

FAKE / MANIPULATION RISK

69%

MISSING-SOURCE RISK

75%

Detected signals:

click

claim

before midnight

Next action: Do not forward immediately. Check source, date, author, and whether credible outlets also reported it.

Learning: Fake-news detection uses text classification, source credibility, emotional language, and sometimes fact-check retrieval. It is not perfect; it gives risk signals, not final truth.

TRY-IT #3

Prompt Battle Scorer

Learners compete to write the best prompt. The simulator scores clarity, context, constraints, and output format.

TASK

YOUR PROMPT

 **Score prompt****Weak prompt****Strong prompt**

PROMPT SCORECARD

PROMPT STRENGTH

25/100

ROLE/CONTEXT

 Missing

SPECIFIC OUTPUT

 Missing

CONSTRAINTS

 Missing

AUDIENCE

 Missing

SUCCESS CRITERIA

 Missing

Upgrade formula: Role +
Context + Constraints +
Output format + Example +
Evaluation criteria.

Learning: Better prompts specify role, context, constraints, examples, output format, and success criteria. This is the first step toward agentic workflows.

TRY-IT #4

Multi-Agent Startup Planner

Learners type an idea and watch 5 simple agents collaborate: research, user persona, MVP, marketing, and risk.

STARTUP IDEA

AI tutor for school students in Inc

TARGET CITY / AUDIENCE

Tier-2 city parents and students

Run agents

AGENT WORKSPACE

Agent 1 · Market Research

Agent 2 · User Persona

Agent 3 · MVP Planner

Agent 4 · Marketing Writer

Agent 5 · Risk Reviewer

Learning: Agentic AI is not “one chatbot answer.” It is workflow decomposition: multiple specialized steps, each producing an intermediate output.

HOW TO RUN IN CLASS

Ask learners to try weird ideas: “AI dosa coach,” “fitness app for coders,” “career coach for testers.” Funny inputs make the class energetic.

TRY-IT #5

NLP Sentiment + Intent Detector

Learners paste a customer message. The simulator detects sentiment, intent, urgency, and suggested action.

CUSTOMER MESSAGE

I paid for the course but I still cannot access the classes. Please fix this today.

A blue button with a speech bubble icon and the text "Analyze text".**Happy****Angry****Refund****NLP OUTPUT****URGENCY****85%****SENTIMENT****Negative****INTENT****Support issue**

Suggested routing: Escalate to human support immediately.

Learning: NLP powers support automation: sentiment detection, intent classification, priority routing, and response drafting.

TRY-IT #6

Will AI Replace My Role?

A career-risk simulator that shows automation risk and AI-upskilling path.

YOUR ROLE

HOW REPETITIVE IS YOUR DAILY WORK?

CAREER AI REPORT**AUTOMATION RISK****70%**

Low55%High

HOW MUCH JUDGEMENT /
STAKEHOLDER CONTEXT IS
NEEDED?

Low55%High

 **Calculate my AI path**

AI AUGMENTATION UPSIDE

55%

Recommended next skills:

Playwright/Cypress

Python scripting

AI test-case generation

quality strategy

Interpretation: Do not only
learn tools. Move from task
execution to judgment,
workflow design, and business
impact.

Learning: AI does not replace every role equally. Repetitive, low-context tasks are more exposed; judgment-heavy roles are more augmented.

Suggested class activity

Ask learners to open this file, try any 2 simulators, and post their result in chat: ATS score, fake-news probability, prompt score, or career-risk score. Then discuss 3–4 learner results live.
